

Mechanical Properties of Polymer-Nano Ceramic Composite For Orthopedic

Filesize: 8.13 MB

Reviews

*This ebook will never be simple to begin on reading but very entertaining to see. It is actually rally exciting throgh reading period of time. You wont truly feel monotony at at any moment of the time (that's what catalogues are for regarding should you ask me).
(Trevion O'Hara)*

MECHANICAL PROPERTIES OF POLYMER-NANO CERAMIC COMPOSITE FOR ORTHOPEDIC

LAP Lambert Academic Publishing Dez 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x12 mm. This item is printed on demand - Print on Demand Neuware - The skeletal system is important to the body both biomechanically and metabolically. It maintains the shape of the body; protects soft tissues; transmits the force of muscular contraction during movement. Bone is a protective and production site for bone marrow, which is a blood-forming system. It is a mineral reservoir which regulates the mineral homeostasis in the circulating body fluids. This book studies bone morphology, composition, mechanics, cells, orthopedics biomaterials and their generations: bioinert (1st generation), bioactive and biodegradable (2nd generation), and designed to stimulate specific cellular responses at the molecular level (3rd generation), as well as the bone graft materials with their orthopedic applications. Using nanotechnology to fabricate these biomaterials as a (MWCNTs) (0.5,1,1.5) %wt, and nanoparticles (HA) (2,3,4) %wt, dispersed respectively in (PMMA), with the use of mixing and vacuum technique; many useful results were obtained in different mechanical and physical inspections done in vitro like (porosity, topography, simple tension, compression, microhardness, and fatigue) while these inspections were carried out under the body conditions. 196 pp. Englisch.
