

## Stellar Accelerator Starship Propulsion. Computed Examples. Volume 5.

Filesize: 3.06 MB

### ***Reviews***

*It in a of the most popular pdf. It really is full of knowledge and wisdom Its been developed in an exceptionally easy way and it is just right after i finished reading through this publication by which really altered me, alter the way in my opinion.*

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.In this fifth volume of the series title, interesting and perhaps overlooked and underemphasized methods of using the star Eta Carinae to power relativistic spacecraft are proposed. Herein, the author presents scenarios for which spacecraft can be suitably accelerated around Eta Carinae to velocities commensurate with the enablement of human crew members to travel cosmic distances in space and forward in time. For much of the assertions made herein, simple high-school math is used along with some basic and primary formulations of Special Relativity. Methods of using negative electromagnetic refractive index pull-sails are explored along which light pull-sail couplings to spacecraft via mechanical and/or electrodynamic means. Conjecture is further presented on g-force mitigation as experienced by the crew. Also included is a digression on bulk materials such as neutronium and quarkonium as such pertains to construction of suitably strong and refractory pull-sails. Eta Carinae is an awesome power source. The star converts about 20 trillion tons of matter into energy per second. This level of power is the equivalent to that required to vaporize the Earth in 1/90 second or the power needed to vaporize 90 Earth-like planets per second.
